High-Flow VANGUARD Manual Lockout Valves

V40 Models Port Sizes: 1-1/2 to 2

Model Shown: V40-12N16

• Easily identified by unique shape

- Lockable only in the OFF position
- Large exhaust port for rapid release of pressure.
- Special Teflon seals help to ensure "shift-ability" even after long periods of non-use.
- Positive action (2 positions only).
- Simple push/pull of the large red handle provides direct manual operations.
- Pressure sensing port allows installation of either the popup indicator or pressure switch to verify pressure downstream to the next obstruction is released.
- ◆ NPTF port threads; optional BSPP threads.

IN

VALVE OPERATION

VALVE OPEN

When the red handle is pulled out, supply air flows freely from inlet to outlet and flow to exhaust is blocked. A detent keeps the handle in the open position. The handle is not designed to be locked in this position, thereby providing for ready shut-off when necessary.

VALVE CLOSED

With a short push of the red handle inward, the flow of supply air is blocked and downstream air is exhausted via the exhaust port while servicing or maintaing machinery. Padlock the valve in this position to prevent the handle from being pulled outward inadvertently to avoid potential for human injury while servicing machinery.

SPECIFICATIONS

Ambient/Media Temperature: 40° to 175°F (4° to 80°C).

Fluid Media: Compressed air. (5 micron recommended)

Inlet Pressure: 15 to 300 psig (1 to 20 bar).

Lock hole diameter: 0.38 inch (9.6 mm).

Length of hole: 0.75 inch (19.1 mm).
