

Inline flowmeter for continuous measurements

- Economic integration in pipe systems without any additional piping
- 3-wire frequency pulse variant to directly interface with PLC's (PNP and NPN)
- Connection to Bürkert devices in remote variants
- Variant HT for high temperature and pressure (max. 125 °C/max. 40 bar) available

Product variants described in the data sheet may differ from the product presentation and description.

Type description

The paddle wheel flowmeter Type 8030/8030-HT is especially designed for use with neutral, slightly aggressive, solid free liquids.

The device is made up of a compact Inline sensor-fitting (Type S030/S030-HT) and a transmitter (Type SE30/SE30-HT). The device is quickly and easily assembled thanks to a bayonet mounting and locking system. The Bürkert "Inline quarter-turn" technology ensures a leakage-free operation.

The Bürkert designed sensor-fitting system ensures simple installation of the devices into all pipelines from DN 06...DN 65.

The device produces a frequency signal, proportional to the flow velocity, which can be transmitted and processed by a Bürkert transmitter/controller.

1. General technical data

1.1. About the device

The flowmeter Type 8030 is available with a wide variety of process connection and

- either with an Hall or Hall “Low Power” transducer

- or with a coil transducer. This variant called High Temperature (8030-HT) is intended for flow measurement at high temperatures.

1.2. All variants

The following data applies to all variants mentioned above.

Product properties	
Material	
Make sure the device materials are compatible with the fluid you are using. Further information can be found in chapter “4.1. Bürkert resistApp” on page 8.	
Further information on the materials can be found in chapter “4.2. Material specifications” on page 8.	
Non wetted parts	
Screw	Stainless steel
Female cable plug	Body, contact holder and cable gland in PA
Wetted parts	
Axis	Ceramics (Al ₂ O ₃)
Seal	FKM or EPDM, depending on the Inline sensor-fitting variant Type S030
Compatibility	Any pipe from DN 06...DN 65 which are fitted with Bürkert Type S030 Inline sensor-fitting. For the selection of the nominal diameter of the Inline sensor-fittings, see data sheet Type S030 ▶.
Pipe diameter	DN 06...DN 65
Dimensions	Further information can be found in chapter “5. Dimensions” on page 9.
Measuring principle	Paddle wheel
Performance data	
Measurement deviation	<ul style="list-style-type: none"> • Teach-in: ± 1 % of the measured value¹⁾ at teach flow rate value • Standard K factor: ± 2.5 % of the measured value¹⁾
Linearity	± 0.5 % of full scale ¹⁾
Repeatability	± 0.4 % of the measured value ¹⁾
Electrical data	
Power source (not supplied)	Limited power source according to UL/EN 62368-1 standards or limited energy circuit according to UL/EN 61010-1 paragraph 9.4
Protection against DC polarity reversal	Yes
Voltage supply cable	<ul style="list-style-type: none"> • Cable with maximum operating temperature greater than 80 °C • Max. 50 m length, shielded • External diameter of wire: 5...8 mm • Cross section of wires: 0.25...1.5 mm²

DTS 1000011081 EN Version: AE Status: RL (released | freigegeben | valide) printed: 15.12.2023

Medium data	
Viscosity	Max. 300 cSt
Rate of solid particles	Max. 1 %
Maximum particle size	0.5 mm
Process/Pipe connection & communication	
Electrical connection	Female cable plug according to DIN EN 175301-803
Approvals and conformities	
Directives	
CE directive	Further information on the CE Directive can be found in chapter “3.2. Standards” on page 7
Pressure equipment directive	Complying with article 4, paragraph 1 of 2014/68/EU directive Further information on the pressure equipment directive can be found in chapter “3.3. Pressure Equipment Directive (PED)” on page 7.
Environment and installation	
Relative air humidity	≤ 80 %, without condensation
Height above sea level	Max. 2000 m
Operating condition	Continuous
Equipment mobility	Fixed
Application range	Indoor and outdoor Protect the device against electromagnetic interference, ultraviolet rays and, when installed outdoors, against the effects of climatic conditions.
Degree of protection according to IEC/EN 60529	IP65 under the following simultaneous conditions: <ul style="list-style-type: none"> • device wired • cable plug mounted and tightened
Installation category	Category I according to UL/EN 61010-1
Pollution degree	Degree 2 according to UL/EN 61010-1

1.) Under reference conditions i.e. measuring medium = water, ambient and water temperature = +20 °C (+68 °F), observing the minimum the minimum inlet and outlet sections and the appropriate inner diameter of the pipe.

1.3. Flowmeter with an Hall or Hall “Low Power” transducer

Note:

If the device is mounted in a humid environment or outside, then the maximum voltage allowed is **35 V DC** instead of 36 V DC.

Product properties

2. Product versions

The flowmeter is available with frequency output in three variants:

- Hall variant** with two transistor outputs NPN and PNP.
 The flowmeter requires an external power supply of 12...36 V DC. The output signal is designed for connection to any system with open collector NPN or PNP frequency input.
 This variant is intended, for example, for connection to Universal flow transmitters or batch controller Type 8025, to pulse divider Type 8022, to eCONTROL universal controller Type 8611 or to multiCELL transmitter/controller Type 8619.
 See [data sheet Type 8025](#) ▶, [data sheet Type 8022](#) ▶, [data sheet Type 8611](#) ▶, [data sheet Type 8619](#) ▶ for more information.
- Hall “Low Power” variant** with one NPN transistor “Low Power” output.
 The flowmeter requires an external power supply of 12...36 V DC, provided by the connected Bürkert transmitter.
 This variant is **only** intended for connection to the Bürkert device Type 8025 in its flow transmitter for “Low Power” flowmeters Type 8025 or to 4...20 mA flow transmitter Type 8022.
 See [data sheet Type 8025](#) ▶, [data sheet Type 8022](#) ▶ for more information.
- High temperature variant (SE30-HT)** with two transistor outputs NPN and PNP.
 The flowmeter requires an external power supply of 12...36 V DC. The output signal is designed for connection to any system with open collector NPN or PNP frequency input. This variant is intended, for example, for connection to Universal flow transmitters or batch controller Type 8025, to pulse divider Type 8022, to eCONTROL universal controller Type 8611 or to multiCELL transmitter/controller Type 8619.
 See [data sheet Type 8025](#) ▶, [data sheet Type 8022](#) ▶, [data sheet Type 8611](#) ▶, [data sheet Type 8619](#) ▶ for more information.

In a 3-wire system, the signal can be connected to a display or processed directly. The electrical connection is provided via a cable plug according to DIN EN 175301-803.

3. Approvals and conformities

3.1. Conformity

In accordance with the Declaration of Conformity, the product is compliant with the EU Directives.

3.2. Standards

The applied standards which are used to demonstrate compliance with the EU Directives are listed in the EU-Type Examination Certificate and/or the EU Declaration of Conformity.

3.3. Pressure Equipment Directive (PED)

The device conforms to article 4, paragraph 1 of the Pressure Equipment Directive (PED) 2014/68/EU under the following conditions:

Device used on a pipe

Note:

- The data in the table is independent of the chemical compatibility of the material and the fluid.
- PS = maximum admissible pressure (in bar), DN = nominal diameter of the pipe

Type of fluid	Conditions
Fluid group 1, article 4, paragraph 1.c.i	DN ≤ 25
Fluid group 2, article 4, paragraph 1.c.i	DN ≤ 32 or PS*DN ≤ 1000
Fluid group 1, article 4, paragraph 1.c.ii	DN ≤ 25 or PS*DN ≤ 2000
Fluid group 2, article 4, paragraph 1.c.ii	DN ≤ 200 or PS ≤ 10 or PS*DN ≤ 5000

7. Product installation

7.1. Installation notes

Note:

The device is not suitable for use in gaseous media and steam.

Minimum straight distances upstream and downstream of the sensor must be observed. These stabilizing distances depend on the pipe's design. Increasing these distances or installing a flow conditioner may be necessary to obtain the best accuracy. For more information, refer to EN ISO 5167-1.

EN ISO 5167-1 specifies the straight inlet and outlet distances that must be complied with when installing fittings in pipe lines in order to achieve calm flow conditions. The most commonly used elements that could lead to turbulence in the flow are shown below. The related minimum inlet and outlet distances that ensure a calm flow are also specified.

Make sure that the measuring conditions at the point of measurement are calm and problem-free.

1.) If the valve cannot be mounted after the measuring device, the minimal distances have to be respected.
 2.) If an expansion cannot be avoided, the minimal distances have to be respected.
 Please note minimum flow velocity

The device can be installed in either horizontal or vertical pipes, but following additional conditions should be respected:

- The pipe always has to be filled with fluid at all times near the device.
- The pipe design must be such that no air bubbles or cavitation can form within the medium near the device at any time.

Pressure and temperature ratings must be respected according to the selected fitting material. The suitable pipe size is selected using the diagram in the chapter "Nominal size selection" of the **data sheet Type S030** ▶.

8. Product operation

8.1. Measuring principle

When liquid flows through the pipe, the paddle wheel with 4 inserted magnets is set in rotation, producing a measuring signal in the sensor (Hall sensor). The frequency modulated induced voltage is proportional to the flow velocity of the fluid.

A K factor, specific to each pipe, enables the conversion of this frequency into a flow rate. This K factor is available in the Inline sensor-fittings' operating instructions, see **Type S030** ▶.

DTS 1000011081 EN Version: AE Status: RL (released | freigegeben | validé) printed: 15.12.2023

9. Product design and assembly

9.1. Product assembly

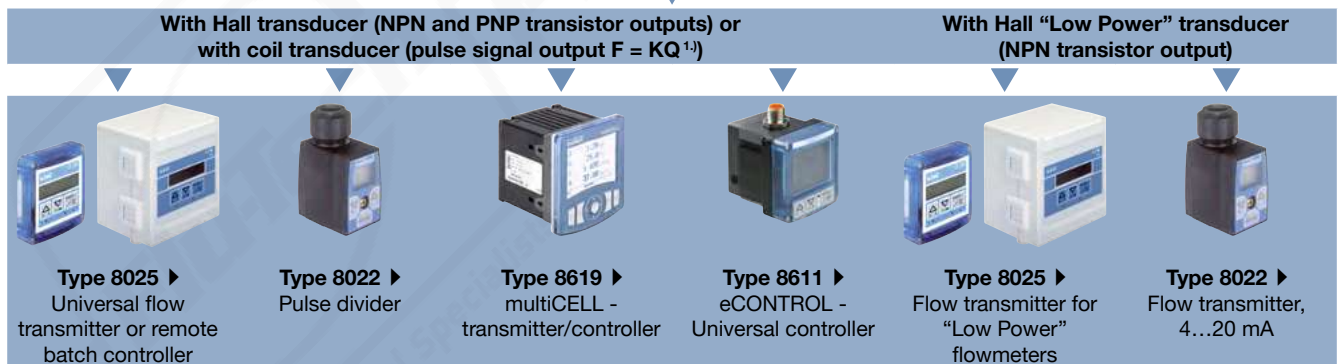

Note:

- The device Type 8030 is made up of a Bürkert Inline sensor-fitting Type S030 equipped with a paddle wheel sensor and a transmitter Type SE30.
- The Inline sensor-fitting Type S030 ensures simple installation into pipes from DN 06...DN 65. The transmitter Type SE30 can be mounted on any Inline sensor-fitting Type S030 and fastened with a bayonet catch, see **data sheet Type S030** ▶ for more information.

10. Networking and combination with other Bürkert products

Example:

1.) Output: F = frequency [Hertz], K = K factor of the Inline sensor-fitting [pulse/liter] and Q = flow rate [l/s]

DTS 1000011081 EN Version: AE Status: RL (released | freigegeben | validé) printed: 15.12.2023

11. Ordering information

11.1. Bürkert eShop

Bürkert eShop – Easy ordering and quick delivery

You want to find your desired Bürkert product or spare part quickly and order directly? Our online shop is available for you 24/7. Sign up and enjoy all the benefits.

11.2. Recommendation regarding product selection

A complete flowmeter Type 8030 consists of a flow transmitter Type SE30 and a Bürkert Inline sensor-fitting Type S030.

See [data sheet Type S030](#) ▶ for more information.

Two different components must be ordered in order to select a complete device. The following information is required:

- **Article no.** of the desired compact Type SE30 flow transmitter (see chapter [“11.4. Ordering chart”](#) on page 14)
- **Article no.** of the selected Type S030 Inline sensor-fitting (see [data sheet Type S030](#) ▶)

11.3. Bürkert product filter

Bürkert product filter – Get quickly to the right product
