DATA SHEET

Type 8137

Radar level meter for higher pressure ranges

- For level measurement up to 35 m
- 4...20 mA/Hart, 2 wires
- Adjustable with display/configuration module or PC
- ATEX approvals

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

Type 8635 Digital electropneumatic Positioner SidoCon

Digital electropneumatic Positioner SideControl

Type 8692

Digital electropneumatic Positioner for the integrated mounting on process control valves

Type 8644 Remote Process Actuation Control System

AirLINE

Type description

Type 8137 is a non-contact radar level meter for continuous level measurement.

The unit is available in two variants:

- with thread and horn antenna (ø 40 mm).
 Particularly suitable for use in small tanks and process vessels for the level measurement of practically any product.
- with flange and horn antenna (ø 40 or 75 mm).
 Particularly suitable for use in storage tanks and process vessels for the level measurement of products such as solvents, hydrocarbons and fuels under extremely difficult process conditions.

General technical data

Product properties

Material

Please make sure the device materials are compatible with the fluid you are using.

Detailed information can be found in chapter "3.1. Chemical Resistance Chart - Bürkert resistApp" on page 5.

Non wetted parts

Housing PBT, Stainless steel 316L (1.4404)

Cover PC transparent

Seal between housing and cover **EPDM** Cable gland PΑ PA Blind plug

Stainless steel 316Ti/316L (1.4571/1.4435) Ground terminal

Wetted parts

Stainless steel 316L Process connection

NBR with aramid fibres for device with thread process connection (for others versions not Process seal

included in the delivery)

Antenna Stainless steel 316L Antenna cone PTFE (TFM 1600 PTFE) Seal Antenna system: FKM

Dimensions Detailed information can be found in chapter "4. Dimensions" on page 6.

Weights 2...17.2 kg (depending on process connection and antenna)

Distance between the end of the level meter antenna and the product surface. Detailed Measuring variable information can be found in chapters "5.1. Measurement deviation diagram" on page

8 and "6.1. Measuring principle" on page 8.

≤3 s

Measuring range Max. 35 m

Recommended measuring range:

0.05...15 m (recommended, with antenna Ø 40 mm)

0.05...35 m (recommended, with antenna Ø 75 mm)

Beam angle^{1.)} 20° with antenna Ø 40 mm

10° with antenna Ø 75 mm

Damping (63 % of the input value) 0...999 s, adjustable

Step response time^{2.)} **Product accessories**

Display LCD in full dot matrix (optional, must be ordered separately). Detailed information can be

found in chapter "7.4. Ordering chart accessories" on page 11.

Performance data Measurement deviation ±2 mm (measuring distance > 0.5 m)

Detailed information can be found in chapter "5.1. Measurement deviation diagram" on

page 8. Measuring range resolution 1 mm

Measuring frequency K-Band (26 GHz technology) Measuring cycle time Approx. 450 ms

• Digital output: ±3 mm/10 K, max. 10 mm Temperature drift

Current output: <0.03 %/10K relating to the 16 mA span or ≤0.3 %

Non-repeatability^{3,)}

4 g with 5...200 Hz according to EN 60068-2-6 (vibration at resonance) Vibration resistance

Shock resistance 100 g, 6 ms according to EN 60068-2-27 (mechanical shock)

Electrical data

Operating voltage (U₂) Without display/configuration module:

- 9.6...35 V DC

- 9.6...30 V DC (Ex ia instrument)

With display/configuration module:

- 16...35 V DC

- 16...30 V DC (Ex ia instrument)

Power Source (not supplied) Limited power source according to UL/EN 60950-1 standards or limited energy circuit

according to UL/EN 61010-1 §9.4 Starting current ≤3.6 mA; ≤10 mA for 5 ms after switching on

- 1.) Outside the specified beam angle, the energy level of the radar signal is 50 % (-3 dB) less
- 2.) Time span after a sudden measuring distance change by max. 0.5 m in liquid applications, max 2 m with bulk solids applications, until the output signal has taken for the first time 90 % of the final value (IEC 61298-2)
- 3.) Already included in the measuring deviation

Approvals

2.1. ATEX-Certification

Note:

Devices with Ex certification have different technical data, see Supplement ATEX Type 8137 b under user manual.

Certificate

Description

EU-Type Examination Certificate Number: PTB 08 ATEX 2002X

ATEX

- II 1/2G Ex ia IIC T6 Ga/Gb
- II 2G Ex ia IIC T6 Gb

Measures to comply with ATEX requirements: refer to the Supplement ATEX Type 8137 ▶ under user manual. The Ex. certification is only valid if the Bürkert device is used as described in the supplement ATEX. If unauthorized changes are made to the device, the Ex. certification becomes invalid.

5. Performance specifications

5.1. Measurement deviation diagram

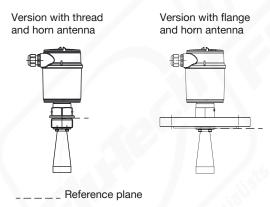

Product operation 6.

6.1. Measuring principle

The radar measuring device consists of an electronic housing, a process connection element with antenna and a sensor. The antenna emits short radar pulses with a duration of approximate 1 ns to the medium. These pulses are reflected by the medium surface and received by the antenna as echoes. Radar waves travel at the speed of light. The running time of the radar pulses from emission to reception is proportional to the distance and hence to the level. The determined level is converted into an output signal and transmitted as a measured value.

The measuring range of the radar level measuring device begins physically at the end of the antenna. However, the min./max. adjustment begins at the reference plane. The position of the reference plane depends on the sensor version.

- Version with thread and horn antenna: the reference plane is the sealing surface on the hexagon.
- Version with flange and horn antenna: the reference plane is the lower side of the flange.

6.2. Product operation notes

Operating techniques

The measuring device provides different operating techniques:

- the display/configuration module
- the suitable Bürkert DTM in conjunction with adjustment software according to the FDT/DTM standard, e.g. PACTware™ and PC
- a HART handheld

The entered parameters are generally saved in the measuring device Type 8137. Optionally, parameters may also be uploaded and downloaded with the display/configuration module or saved in a file by using PACTware™/8137-DTM.

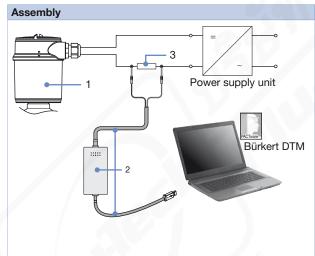

Set up with display/configuration module

Display/configuration module

Description

The display/configuration module can be inserted into the measuring device and removed again at any time. It is not necessary to interrupt the power supply. The measuring device is adjusted via the four keys of the display/configuration module.

Set up with PACTware™/DTM and HART communication

Description

The measuring device can be operated thanks to PACTware™, via HART communication. An interface adapter is necessary for the adjustment with PACTware™. For the setup of the Type 8137, the DTM in the actual version must be used. The basic version of DTM incl. PACTware™ is available as a free-of-charge download from the internet at www.burkert.com >.

Connecting the PC via HART

No. Description Measuring device Type 8137 HART-USB Modem Resistance 250 Ω

Necessary components:

- Measuring device Type 8137
- PC with PACTware™ and suitable Bürkert DTM
- HART-USB Modem
- Resistance approx. 250 Ω
- Power supply unit
